

Commoditize Your CI Compute: Spot Instances Without the Spotty Reliability

Felicitas Pojtinger (maintainer of Drafter)
@pojntfx

Are you running your CI/CD on spot instances?

Loophole Labs

70-90%
savings

Pay only for
what you use

Better for
cloud
providers, too

30-120s termination notice

✗ **Expensive** on-demand instances

✗ Spots only for **stateless** jobs

✗ **Complex custom checkpointing**

✗ **Accept failures and retry**

Fewer tests that don't run for
each commit

Short or no **benchmarks**

€\$¥

No or little **fuzzing**

LAWS OF TECH: COMMODITIZE YOUR COMPLEMENT

[AI economics](#), [economics](#), [insight porn](#), [Google](#)

A classic pattern in technology economics, identified by Joel Spolsky, is layers of the stack attempting to become monopolies while turning other layers into perfectly-competitive markets which are commoditized, in order to harvest most of the consumer surplus; discussion and examples.

migration

Silo

Data plane

Conduit

Connection
migration

Mirage

GPU migration

PVM

PVM: Pagetable Virtual Machine

Run VMs on VMs
without nested virtualization or
emulation

Performance **overhead**
<10% compared to host

Custom Loophole Labs
patches for live migration

Drafter: Compute Unit

Hypervisor with **first-class live migration** support

Normalizes CPU feature sets across hosts

Based on our fork of **Firecracker**

Silo: Data Migration System

Tracks disk & memory
changes and learns **access**
patterns

Prioritizes important blocks
over P2P connection and falls
back to S3

Continuously backs up to S3

Conduit: Network Migration

Written in **eBPF**:
Runs on network card at line
speed

Supports migrating
ingress & egress traffic

Works on L3 (both UDP
& TCP are supported)

Mirage: GPU Workload Migration

Zero application changes
needed

Supports both
inference and training

Supports migrating a workload between **heterogeneous hosts and GPUs**

Use Spot Instances for Any Workload

Architect lets you take advantage of Spot Instances for any workload on any Cloud - saving you 90% on your compute costs for even the most demanding tasks like Data Pipelines, Machine Learning, and CI/CD.
